PSYCHOPHYSIOLOGY

Volume 9

January 1972–November 1972

Published Bimonthly by THE SOCIETY FOR PSYCHOPHYSIOLOGICAL RESEARCH
Detroit, Michigan 48207

COPYRIGHT © 1972 BY THE SOCIETY FOR PSYCHOPHYSIOLOGICAL RESEARCH

Contents of Volume 9

No. 1, January 1972

Effects of CS Duration and Instructional Set on Cardiac Anticipatory Responses to Stress in Field Dependent and Independent Subjects. KRYSTYNA DRONSEJKO 1

The Latency Distribution of the Skin Conductance Response as a Function of the CS–UCS Interval. KENNETH R. BURSTEIN AND BARRY D. SMITH .. 14

Behavioral and Physiological Effects of False Heart Rate Feedback: A Replication and Extension. ROBERT M. STERN, RONALD W. BOTTO, AND CHRISTINE D. HERRICK 21

Sources of Information Which Affect Training and Raising of Heart Rate. JOEL S. BERGMAN AND HAROLD J. JOHNSON 30

Some Antecedents of Directional Fractionation: Effects of "Intake-Rejection," Verbalization Requirements, and Threat of Shock on Heart Rate and Skin Conductance. BARBARA BLAYLOCK 40

CNV Correlates of Task Difficulty and Accuracy of Pitch Discrimination. FREDERICK C. DELSE, GAIL R. MARSH, AND LARRY W. THOMPSON 53

Awareness of Heart Activity and Self-Control of Heart Rate. EDWARD B. BLANCHARD, LARRY D. YOUNG, AND PHILIP MCLEOD 63

Urinary Acid Phosphatase Secretion Under Different Arousal Conditions. ANDREW M. BARCLAY AND DOUGLAS M. LITTLE 69

Methodology

Reliability of Sleep Measures. J. MOSES, A. LUBIN, P. NAITOH, AND L. C. JOHNSON 78

Special Publications

In Memoriam: Danièle Jouvet-Mounier, M.D., Ph.D., 1935–1970. HOWARD ROFFWARG 83

Abstracts of Papers Presented to the Eleventh Annual Meeting of the Association for the Psychophysiological Study of Sleep. OLGA PETRE-QUADENS AND MICHAEL CHASE, PROGRAM CHAIRMEN 84

Letter to the Editor 154

In Memoriam 155

Announcements 156

Author Index 157

No. 2, March 1972

Presidential Address, 1971

Operant Conditioning of Cardiac Function: A Status Report. BERNARD T. ENGEL 161

Is the Contingent Negative Variation Contingent on a Motor Response? EMANUEL DONCHIN, LAUREN A. GERBRANDT, LARRY LEIFER, AND LEDYARD TUCKER 178

Physiological Concomitants of Reaction Time Performance in Normal and Brain-Damaged Subjects. FRANK A. HOLLOWAY AND OSCAR A. PARSONS 189

Factor Analytically Derived Components of Orienting, Defensive, and Conditioned Behavior in Electrodermal Conditioning. ARNE ÖHMAN.... 199
Congenital Nystagmus and Sleep: A Replication. ARTHUR M. ARKIN, HARRIET LUTZKY, AND MAX F. TOTH..... 210
Differential Responsiveness of Two Electrodermal Indices to Psychological Stress and Performance of a Complex Cognitive Task. DEAN G. KILPATRICK..... 218
The Effects of Continuous, High Intensity, White Noise on the Human Sleep Cycle. THOMAS D. SCOTT..... 227
The Auditory Evoked Response to Stimuli Producing Periodicity Pitch. ROBERT A. BUTLER..... 233
Characteristics of the Orienting Response in Hyperactive and Normal Children. NANCY J. COHEN AND VIRGINIA I. DOUGLAS..... 238

Methodology

Alterations in Cardiac Contractility During Classical Aversive Conditioning in Dogs: Methodological and Theoretical Implications. PAUL A. OBRIST, JAMES L. HOWARD, JAMES E. LAWLER, JAMES R. SUTTERER, KENNETH W. SMITHSON, AND PHILIP L. MARTIN..... 246

Instrumentation

A Zero-Setter and Voltage Reference Unit for EEG Amplifier Systems. LEONARD MACPHERSON AND BERT S. KOPELL..... 262

Abstracts

Abstracts of Papers Presented at the Eleventh Annual Meeting of the Society for Psychophysiological Research..... 266

Brief Reports

Electrodermal Recovery Time as a Supra Sensitive Autonomic Index of Anticipated Intensity of Threatened Shock. JOHN J. FUREDY... 281
Large Magnitude Heart Rate Changes in Subjects Instructed to Change Their Heart Rates and Given Exteroceptive Feedback. JOSEPH H. STEPHENS, ALAN H. HARRIS, AND JOSEPH V. BRADY..... 283
Announcements..... 286
Author Index..... 287

No. 3, MAY 1972

Editorial..... 289
Reliability and Interjudgment Predictability of Subjective Judgments of Electrocutaneous Stimulation. BERNARD TURSKY AND DONALD O'CONNELL..... 290
Control of Diastolic Blood Pressure in Man by Feedback and Reinforcement. DAVID SHAPIRO, GARY E. SCHWARTZ, AND BERNARD TURSKY..... 296
Effects of Exteroceptive Feedback and Instructions on Control of Spontaneous Galvanic Skin Responses. VALERIE KLINGE..... 305
Preception: Autonomic Response to Shock as a Function of Predictability in Time and Locus. D. T. LYKKEN, I. MACINDOE, AND A. TELLEGEN.... 318
The Effect of Reaction Time Feedback on Reaction Time and Contingent Negative Variation. CHARLES A. REBERT..... 334

Reinforcement of Spontaneous Electrodermal Activity: A Cross-Cultural Study in Japan. DAVID SHAPIRO AND TAKAMI WATANABE..... 340
Tryptophan and Sleep in Young Adults. WILLIAM J. GRIFFITHS, BOYD K. LESTER, JOE D. COULTER, AND HAROLD L. WILLIAMS..... 345
Visual Sensitivity as a Function of Phase of Cardiac Cycle. ROGERS ELLIOTT AND VIRGIL GRAF..... 357
Menstrual, Diurnal, and Activation Effects on the Resolution of Temporally Paired Flashes. G. W. DE MARCHI AND J. E. TONG..... 362
A Comparative Study of the Effects of Electrical and Psychological Stimulation on Muscular Fatigue. P. S. HUNDAL AND SURISTHA GILL..... 368

Methodology

Range Correction Applied to Heart Rate and to GSR Data. D. T. LYKKEN..... 373

Instrumentation

A Method for Storing a Program of Stimuli and Responses on Magnetic Tape Using Frequency Coding. L. R. HARTLEY..... 380

No. 4, JULY 1972

Cumulative Expectancy, Subjective Report of Alertness, and Electrodermal Activity. ANTHONY GALE, RAY BULL, AND MARY HASLUM..... 383
Are the Eye Movements of Dreaming Sleep Related to the Visual Images of the Dreams? LAWRENCE JACOBS, MARTIN FELDMAN, AND MORRIS B. BENDER..... 393
Some Characteristics of Digital Vasomotor Activity. LARS LIDBERG, DAISY SCHALLING, AND STEN E. LEVANDER..... 402
Lateral Specialization of Cognitive Mode: An EEG Study. DAVID GALIN AND ROBERT ORNSTEIN..... 412
Response Requirements and Directional Fractionation of Autonomic Responses. ROBERT D. HARE..... 419
Intensity Judgments and Physiological Response Amplitude. KENNETH BULL AND PETER J. LANG..... 428

Methodology

Interrelations Between Amplitude, Latency, Rise Time, and the Edelberg Recovery Measure of the Galvanic Skin Response. RUSSELL A. LOCKHART..... 437
The Comparability of Cross-Laboratory Resting Heart Rate: A Reply to Elliott. ARTHUR NORMAN AND CHARLES H. MELVILLE..... 443
Further Comment on the Significance of Heart Rate in Cross-Laboratory Comparison. ROGERS ELLIOTT..... 450

Instrumentation

Neonatal Muscle Tone Recorded From Eye Movement Leads. ROBERT J. HARMON AND ROBERT N. EMDE..... 458
An Alpha Detection and Feedback Control System. ROBERT BOUDROT 461

Brief Reports

The Effects of Unilateral Alpha Training on Visual Evoked Response in a Dyslexic Adolescent. JOHN E. O'MALLEY AND C. KEITH CONNERS 467

Period Analysis of the EEG in Relation to Age and Reaction Time in Children. WALTER W. SURWILLO 471
Letter to the Editor 473
Announcements 474
Author Index 476

No. 5, SEPTEMBER 1972

Two Measures of Auditory Evoked Response Amplitude and Their Relationship to Background EEG. PETER E. TANGUAY AND EDWARD M. ORNITZ 477
Signal Detection and the "Cardiac Arousal Cycle." LEO F. DELFINI AND JOSEPH J. CAMPOS 484
Relationship Between Kinesthetic Aftereffects and "Strength of the Nervous System." STEPHEN M. SALES AND WARREN F. THROOP 492
The Effects of Distorted Visual Input on Sleep. SUSAN R. ALLEN, IAN OSWALD, STUART LEWIS, AND JOANNA TAGNEY 498
Pupil Size and Instructional Set in Recognition and Recall. ROBERT F. STANNERS AND DONALD B. HEADLEY 505
Electrodermal Recovery Rate, Goal-Orientation, and Aversion. ROBERT EDELBERG 512

Computer Software

Computer Software Bank For Psychophysiology. S DAVID KAHN ... 521
A Survey of the Sources and Availability of Computer Software Applicable to Psychophysiological Research in the Periodical Literature. S DAVID KAHN, GLENDA W. BOWNE, AND EMMETT B. SWINT, JR. 527

Methodology

EOG and Delta Rhythmicity in Human Sleep EEG. RAYMOND HILBERT AND PAUL NAITOH 533
A Methodological Note: Comparison Between Period and Rate Data in Studies of Cardiac Function. Z. A. KHACHATURIAN, J. KERR, R. KRUGER, AND J. SCHACHTER 539

History

The Diagnosis of Love-Sickness: Experimental Psychophysiology Without the Polygraph. MAREK-MARSEL MESULAM AND JON PERRY 546

Instrumentation

Time Stick for Measuring Action and Reaction Speed. A. V. WOLF AND RODNEY A. WOLF 552
Preprocessor Adapts Cardiovascular Signals to a Minicomputer. DAVID T. KRAUSMAN, WALTER EHRLICH, AND JOSEPH V. BRADY 554
Differences in Readiness Potential Associated with Push-Button Construction. JUDITH M. FORD, LEONARD MAC PHERSON, AND BERT S. KOPELL 564
Announcements 568

No. 6, November 1972

Stereotype Temporal Conditioning in Infants. YVONNE BRACKBILL AND HIRAM E. FITZGERALD 569
The Objective Use of Multiple Physiological Indices in the Detection of Deception. ROBERT J. CUTROW, ARTHUR E. PARKS, G. NELSON LUCAS, AND KATHRYN C. THOMAS 578
Performance and Arousal as a Function of Incentive, Information Load, and Task Novelty. ROBERT T. WILKINSON, SAMI EL-BEHERI, AND CHARLES C. GIESEKING 589
Hypnotic Control of Peripheral Skin Temperature: A Case Report. CHRISTINA MASLACH, GARY MARSHALL, AND PHILIP G. ZIMBARDO 600
Cardiovascular Components of Orienting and Defensive Responses. ROBERT D. HARE 606
The Effect of Uncertainty on Mastery of Stress: A Case Study. WALTER D. FENZ AND G. BRIAN JONES 615
Psychophysiological Significance of Skin Potential Activity in Monkeys. KATUO YAMAZAKI, TETUO TAJIMI, KEN'ICHI OKUDA, AND YOSIZUMI NIIMI. 620

Methodology

An Accurate, Direct Reading, Beat-By-Beat, Heart Rate Scale for Measurement of the Cardiac Orientation Reaction. R. W. HAYES AND P. H. VENABLES 624
Individual Differences in Autonomic Responses: Illustration of a Possible Solution. LAWRENCE F. VAN EGEREN, MARY W. HEADRICK, AND PETER L. HEIN 626
Signal Averaging the Human Somatosensory Evoked Response: A Focal Evoked Response? HILTON STOWELL 634
Differential Contribution of Blinks and Vertical Eye Movements as Artifacts in EEG Recording. JAMES C. CORBY AND BERT S. KOPELL 640
Site, State, and Subject Characteristics of Palmar Skin Potential Levels. MARGARET J. CHRISTIE AND PETER H. VENABLES 645
What is Skin Potential Level? KATUO YAMAZAKI AND TETUO TAJIMI. 650

Computer Software 653

Instrumentation

Simulating the Waking and Sleeping EEG. GUY C. SHEATZ 656
A Differential Microvolt Test Signal Adjustable to Given Laboratory Requirements. GUY C. SHEATZ 658
A Technique for Recording Human Body Posture During Sleep. ALAIN MUZET, JEAN BECHT, PIERRE JACQUOT, AND PIERRE KOENIG ... 660
Direct-Current Fluorescent Lighting for Experimental Chambers. J. B. JOHNSON AND O. D. MURPHEE 663
Magnetic Tape Stimulus Programmer Using Touch-Tone Equipment. FRED A. OEHLER, HAL ELGIE, AND ENOCH CALLAWAY 665
Brief Report 667

Subject Index For Volume 9

Activation (see also Arousal)
induced high HR, effects on visual discrimination, 362
vs goal-orientation, as determinant of accelerated electrodermal recovery, 512
Actographic bed, for recording body posture during sleep, 660
A/D converter, for cardiovascular functions, preprocessor to minicomputer, 554
Affective stimuli, visual
and directional fractionation of HR, skin conductance, and vasomotor activity, 419
and orienting vs defensive response patterns in HR and cephalic pulse amplitude, 606
Afferent cardiovascular feedback hypothesis, and differential sensory sensitivity as function of EKG cycle, 357, 484
Age, in children, and reaction time, effect of developmental changes in EEG period, 471
Alertness, self-ratings, and skin conductance response during cumulative expectancy of vigilance task, and reaction time, 383
Alpha feedback training
and visual evoked responses, 467
instrumentation, 461
Amino acids, L-tryptophan, effects on REM and slow wave sleep, large vs moderate doses, 345
Amplifier zero-setter, and voltage reference unit, in measurement of EEG averaged evoked response, 262
Analog signal preprocessor, to minicomputer, for cardiovascular functions, 554
Ancient psychophysiology, and diagnosis of lovesickness, 546
Anticipatory responses, HR, to stress, effects of CS duration and instructional set, and field dependence, 1
Anxiety
and effects of shock predictability in time, and locus on skin conductance and HR responses, 318
and sexual arousal, and urinary acid phosphatase secretion, 69
effects on GSR spontaneous fluctuations and base levels, and effects of cognitive activity and stress, 218
Anxiety gradients, conditioned and inhibitory, in a parachutist prior to jump, effect of uncertainty, 615
Apparatus, see Instrumentation
Arousal (see also Activation)
and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
during vigilance task, effects of cumulative expectancy, and reaction time and alertness ratings, 383
in detection of deception, evaluation of single and combined physiological indices, 578
induced high HR, effects on visual discrimination, 362
Arousal patterns, general vs emotion-specific components, 69
Attention
and effects of false HR feedback on subjective ratings of visual stimuli and actual HR and GSR, 21
to external stimuli, effect on directional fractionation of HR and skin conductance, and interaction with the effects of verbalization and shock threat, 40
Auditory evoked response, see Evoked response
Auditory sensitivity, during signal detection, and EKG phase, 484
Augmenters vs reducers, and measures of "strength of the nervous system," instead of kinesthetic aftereffects, 492
Autonomic Nervous System, conditioning, and CNS changes, 161
Autonomic Perception Questionnaire, awareness of heart activity, and voluntary control of HR using external feedback, 63
Autonomic responsivity, during foreperiod of reaction time task, and performance, effect of brain damage, 189
Autonomic-somatic integration, 189
Averaged evoked response, see Evoked response
Awareness, of heart activity, effect on voluntary control of HR using external feedback, 63

Base level, skin potential, 645, 650
Biofeedback, see Feedback
Biorhythmicity, of delta sleep, recorded from EOG electrodes, 533
Blood pressure
changes during operant HR conditioning, early vs late in training and speeding vs slowing, 161
diastolic, operant conditioning with feedback and reinforcement, 296
diastolic vs systolic, during classical aversive conditioning in dogs, influence on HR and cardiac contractility, 246
measurement, for immediate feedback during operant conditioning, 296
Body movements, during sleep, recording of, 660

Brain damage, and autonomic-somatic integration during reaction time task, and performance, 189

Cardiac conditioning, see Conditioning
Cardiac contractility, changes during classical aversive conditioning in dogs, extrinsic vs intrinsic sympathetic influences, and method of measurement in humans, 246
Cardiac cycle, and differential sensory sensitivity, 357, 484
Cardiodynamics, in operant control of cardiac function, vagal vs sympathetic influence, 161
Cardiovascular functions (see also Heart rate, Electrocardiogram, Blood pressure)
  data acquisition, preprocessor to minicomputer, 554
  heart rate vs heart period measurement, in infants, 539
  integration-differentiation during operant conditioning, 296
Cardiovascular system, operant conditioning of, 161
Cats, skin potential base level and spontaneous fluctuations, and CNS activation, effects of peripheral denervation and death, 650
Central Nervous System, activation, and skin potential base level and spontaneous fluctuations, 650
Cephalic pulse amplitude, to affective stimuli and digital pulse amplitude, directional fractionation, effects of cognitive elaboration and motor response requirement, 419
  orienting and defensive responses, effects of individual differences, 606
Children
  auditory evoked response during sleep, and EEG background intensity, 477
  hyperactive vs normal, skin conductance ORs to signal vs non-signal stimuli, and reaction time performance, 238
  relationship between reaction time and age, effect of developmental changes in EEG period, 471
Classical conditioning, see Conditioning
Cognition, verbal vs spatial, EEG asymmetry, 412
Cognitive elaboration, effects on directional fractionation to affective stimuli of HR, skin conductance, and vasomotor activity, 419
Cognitive processes
  and psychosomatic medicine, 600
  and pupil dilation, 505
Cognitive task, effects on GSR spontaneous fluctuations and base levels, and effects of stress and anxiety, 218
Computational task, effect on CNV, 178
Computer hardware, preprocessor for cardiovascular functions, 554
Computer software
  beat-by-beat measurement of heart rate OR, 624
  instructions for program submission, 521
  motor unit analysis
    event frequency histogram, 655
    time interval histogram, 654
  sleep scoring, 653
  survey of available sources, 527
Conditioning
  classical
    aversive, in dogs, HR and cardiac contractility changes, sympathetic vs vagal influences, 246
    delayed
      electrodermal responses, ORs vs CRs vs defensive responses, derived by factor analysis, 199
      HR, effects of CS duration, instructional set, and field dependence, 1
    GSR, latency, effect of different CS-UCS intervals, 14
    HR response patterns, individual differences and use of factor analysis, 626
  operant
    cardiac function, and blood pressure and EEG changes, early vs late in training and speeding vs slowing, 161
    diastolic blood pressure, with feedback and reinforcement, 296
    skin potential responses, effects of contingent vs noncontingent reinforcement, Japanese vs American subjects, 340
  temporal, simple vs stereotype, pupillary dilation and constriction, in infants, 569
Congenital nystagmus, see Nystagmus
Contamination of the somatosensory evoked response, by eye movement, 634
Contingent Negative Variation (CNV)
  contamination by blinks and vertical eye movements, correction procedure, 640
  during reaction time task, effects of flicker vs single flash and reaction time feedback, 334
  effects of motor, selective motor, predictive, and computational tasks, 178
  effects of task difficulty and accuracy of pitch discrimination, 53
Cross-cultural, American vs Japanese subjects in operant conditioning of skin potential responses, effects of contingent vs noncontingent reinforcement, 340
CS duration, effect on HR conditioned response, acceleration vs deceleration, 1
CS–UCS interval, effect on GSR latency, 14

Data acquisition system, preprocessor to minicomputer for cardiovascular functions, 554
Death, effect on skin potential base level in cats, 650

Deception, detection of, evaluation of single and combined physiological indices, 578
Defensive responses
cephalic vasoconstriction, 606
electrodermal, 199, 512
HR acceleration, 606
Delta analysis, using EOG, 533
Diastolic blood pressure, see Blood pressure
Differential microvolt signal generator, for calibrating or testing differential amplifiers, 658
Digital pulse amplitude, see Finger pulse
Direct current illumination, fluorescent, for experimental chambers, 663
Directional fractionation
digital and cephalic vasomotor activity, 419
HR and skin conductance, 40, 419
Disparity phenomena, as measured by GSR latency and recovery time, instead of amplitude, 437
Diurnal rhythms, effects on visual discrimination, 362
Dream imagery, and REMs, 210, 393
Drive, general vs specific response components, 69
Dyslexia, effects of bilateral and unilateral alpha training on visual evoked response, 467

Eccrine sweat glands, vs epidermis, and finger and hand differences in skin potential levels, effects of habituation, 645
Edelberg measure, of GSR recovery time, 281, 437, 512
Electric shock, see Shock
Electrical stimulation, local, effects on output of fatigued muscles, 368
Electrocardiogram (EKG)
cycle phase
and auditory sensitivity and response bias, signal detection, 484
differential visual sensitivity, 357
heart rate vs heart period analysis, in infants, 539
Electrodermal activity
effects of cognitive activity, stress, and anxiety, 218
effects of goal-orientation, activation, and shock threat, 512
Electrodermal responses (see also GSR, Skin conductance)
during foreperiod of reaction time task, and performance, effect of brain damage, 189
ORs vs CRs vs defensive responses, in delayed classical conditioning, derived by factor analysis, 199
Electroencephalogram (EEG)
alpha detection and feedback control system, 461
background intensity during sleep, and auditory evoked response in children, 477
changes during operant HR conditioning, early vs late in training and slowing vs speeding, 161
contamination by eyeblinks and vertical eye movements, correction procedure, 640
delta sleep, recorded from EOG electrodes, 533
evoked response to periodic complex sound, reflecting acoustic spectrum vs modulation rate, 233
parietal and temporal vs occipital, in measurement of lateral specialization of cognitive mode, verbal vs spatial, 412
steady potential shifts, and use of skin resistance operated push button vs standard push button for operant response, 564
EEG amplifier, zero-setter and voltage reference unit, 262
EEG asymmetry, lateral specialization of cognitive mode, verbal vs spatial, 412
EEG period, developmental changes in children, effect on relationship between reaction time and age, 471
EEG simulator, waking and sleeping, 656
Electromyogram (EMG) (See also Muscle tension and Motor)
during foreperiod of reaction time task, and performance, effect of brain damage, 189
for infant sleep state determination, from ocular electrodes, 458
Electro-ocular potentials, blinks and vertical eye movements, contamination of EEG recordings, correction procedure, 640
Electro-oculogram (EOG)
AC vs DC recording, for evidence of REMs following visual dream imagery, 393
blinks and vertical eye movements, contamination of EEG recordings, correction procedure, 640
eye movements in nystagmus patients, as negative evidence for REMs following visual dream imagery, 210
for recording of infant muscle tone for sleep state determination, 458
for recording of slow wave sleep, 533
Emotions, general vs specific response components, 69
Epidermis, vs eccrine sweat glands, and finger and hand differences in skin potential levels, effects of habituation, 645
Erasistratos, and ancient physicians' use of psychophysiology in diagnosis of love-sickness, 546
Event frequency histogram, for motor unit analysis, computer software, 655
Evoked cortical potential, see Evoked responses
Evoked responses
analysis, peak to peak vs multiple component, in children, 477
auditory
during sleep, and EEG background intensity in children, 477
to periodic complex sound, reflecting acoustic spectrum vs modulation rate, 233

measurement, zero-setter and voltage reference unit, 262
somatosensory, contamination by eye movement, 634
to auditory discrimination, effects of judgment accuracy and stimulus intensity, and reaction time and HR, 428
to shock, effects of predictability in time and locus, and anxiety, 318
visual
effects of bilateral and unilateral alpha training, in dyslexic adolescent, 467
in children with learning disorders, recording technique, 154, 473
Evoked skin potential reflex, see Skin potential
Expectancy
and dependence of the CNV on a motor response, 178
as reflected in pre-US response in delayed classical conditioning, derived by factor analysis, 199
during vigilance task, effects on skin conductance response and reaction time, and alertness ratings, 383
of shock time and locus, effects on HR and skin conductance responses, and anxiety, 318
External stimulation, high intensity white noise, effects on sleep, 227
Exteroceptive feedback, see Feedback
Eye movements, and measurement of somatosensory evoked responses, 634
Eyeblinks
rate and latency, effectiveness in detection of deception, singly and in combination with other measures, 578
vs vertical eye movements, contamination of EEG recordings, correction procedure, 640

Factor analysis
in assessing the effects of motor and non-motor tasks on the CNV, 178
in derivation of electrodermal CRs, ORs, and defensive responses in delayed classical conditioning, 199
of HR conditioned response patterns, study of individual differences, 626
Feedback
alpha, instrumentation for detection and feedback control system, 461
and voluntary control of HR, effect of awareness of heart activity, 63
effect on voluntary control of HR, 30
external
accurate and false, effects on voluntary control of GSR, and instructions, 305
and instructions, effects on voluntary control of HR, 283
in operant conditioning of diastolic blood pressure, and reinforcement, 296
in operant control of HR, and extinction, 161
of false HR changes, effects on subjective ratings of visual stimuli and actual HR and GSR, and effects of attention, 21
of reaction time, effects on CNV and reaction time, 334
Field dependence, and instructional set, effects on HR conditioned response, 1
Finger and hand differences, in skin potential levels, effects of habituation, 645
Finger pulse volume
and cephalic pulse amplitude, directional fractionation, effects of cognitive elaboration and motor response requirement, 419
and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
as arousal indicator, 589
effectiveness in detection of deception, singly and in combination with other measures, 578
vs finger volume, relationships among size and latency of responses, spontaneous fluctuations, and habituation, 402
Finger volume, vs finger pulse volume, 402
Flicker noise, in measurement of EEG averaged evoked response, minimized by zero-setter and voltage reference unit, 262
Fluorescent illumination, direct current, for experimental chambers, 663
Frequency coding, system for encoding and decoding stimuli and responses on magnetic tape, 380
Frontal eye fields, and measurement of somatosensory evoked response, 634

Galen, and ancient physicians' use of psychophysiology in diagnosis of love-sickness, 546
Galvanic skin response (GSR)
interrelationships among recovery time, latency, rise time, and amplitude, 437
latency during conditioning and pseudoconditioning, effects of different interstimulus intervals, 14
palmar vs volar, effectiveness in detection of deception, singly and in combination with other measures, 578
recovery time
as index of anticipated intensity of threatened shock, 281
effects of goal-orientation, activation, and shock threat, 512
relationship to latency, rise time, and amplitude, 437
spontaneous fluctuations, effects of cognitive activity, stress, and anxiety, 218
to visual stimuli, effects of false feedback of HR changes and attention, 21
voluntary control, effects of instructions and accurate and false feedback, 305
Goal-orientation, vs activation, as determinant of accelerated electrodermal recovery, 512

Habituation
pulse volume vs finger volume responses, 402
skin potential levels, 645
skin potential responses, 620
Heart rate (HR)
and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
and skin conductance, directional fractionation, effects of intake-rejection tasks, verbalization requirements, and shock threat, 40
as arousal indicator, 589
changes during classical aversive conditioning, in dogs, sympathetic vs vagal innervation, 246
classical conditioned response, effects of CS duration, instructional set, and field dependence, 1
coincidental conditioning during operant conditioning of diastolic blood pressure, 296
conditioned response patterns, individual differences and the use of factor analysis, 626
deceleration, during foreperiod of reaction time task, and performance, effect of brain damage, 189
effectiveness in detection of deception, singly and in combination with other measures, 578
false feedback of changes, effects on subjective ratings of visual stimuli and actual HR and GSR, and effects of attention, 21
induced high, effects on visual discrimination, 362
of parachutist prior to jump, effect of uncertainty on mastery of stress, 615
operant conditioning of, and blood pressure and EEG changes, early vs late in training and speeding vs slowing, 161
orienting and defensive responses, to affective visual stimuli, effects of individual differences, 606
response to affective stimuli, directional fractionation, effects of cognitive elaboration and motor response requirement, 419
response to auditory discrimination task, effects of judgment accuracy and stimulus intensity, and reaction time and cortical evoked response, 428
response to shock, effects of predictability in time and locus, and anxiety, 318
resting levels, cross-laboratory comparisons, 443, 450
tonic levels and responses, range correction for individual differences, 373
voluntary control
effects of feedback, 30, 283
effects of instructions, 30, 283
effects of reinforcement, 30
sex differences, 667
using external feedback, effect of awareness of heart activity, 63
Heart rate data, vs heart period data, effects of transformation, in infants, 539
Hemodynamics, in operant control of cardiac function, early vs late in training and speeding vs slowing, 161
High frequency eye tremor, and measurement of somatosensory evoked response, 634
Hyperactive children, vs normal, skin conductance ORs to signal vs non-signal stimuli, and reaction time performance, 238
Hypnosis, effect on voluntary control of peripheral skin temperature, 600

Ibn Sina (Avicenna), and ancient physicians' use of psychophysiology in diagnosis of lovesickness, 546
Incentive, effects on arousal and reaction time performance, 589
Individual differences
effect on orienting vs defensive response patterns in HR and cephalic pulse amplitude, 606
in HR conditioned response patterns, use of factor analysis, 626
in range of HR and skin conductance base levels and responses, correction for, 373
Individual response specificity, and essential hypertension, 161
Individual response stereotypy, and relationship between reaction time performance and arousal, 589
Induced HR, see HR
Infants
heart period vs heart rate data, effects of transformation, 539
sleep, recording muscle tone for state determination, from ocular electrodes, 458
temporal conditioning, simple vs stereotype, pupillary dilation and constriction, 569
Instructional set
and field dependence, effects on HR conditioned response, 1
variable, effects on pupil dilation and recognition and recall, 505
Instructions
and accurate and false feedback, effects on voluntary control of GSR, 305
and external feedback, effects on voluntary control of HR, 30, 283
Instrumentation
alpha detection and feedback control system, 461
body posture recording during sleep, 660
cardiovascular functions, preprocessor to minicomputer, 554
differential microvolt signal generator, 658
direct-current fluorescent illumination, 663
EEG averaged evoked response, zero-setter and voltage reference unit, 262
EEG simulator, 656

heart rate, direct reading scale for beat-by-beat measurement, 624
magnetic tape encoding and decoding of stimuli and responses using frequency coding, 380
muscle tone recording for sleep state determination in infants, from ocular electrodes, 458
operant response, skin resistance operated push button, 564
reaction time, time stick, 552
stimulus programmer using Touch-Tone equipment, 665
Intake-rejection tasks, effects on directional fractionation of HR and skin conductance, and interaction with the effects of verbalization and shock threat, 40
Integrated circuit decoders, in stimulus programmer using Touch-Tone equipment, 665
Integration-differentiation, of cardiovascular functions, during operant conditioning, 296
Intensity discrimination task, of auditory stimuli, effects of accuracy and stimulus intensity on HR, cortical evoked response, and reaction time, 428
Interference reduction, use of direct-current fluorescent illumination, 663
Interstimulus interval
effect on GSR latency during conditioning and pseudoconditioning, 14
effect on HR conditioned response, acceleration vs deceleration, 1

Judgment accuracy, in auditory discrimination task, effects on HR, reaction time, and cortical evoked response, 428

Kinesthetic aftereffects, and "strength of the nervous system," as measures of augmenters vs reducers, 492

Lacey's hypothesis, cardiac cycle arousal effects, and signal detection during different EKG phases, 357, 484
Latency distributions, GSR, with different interstimulus intervals, and effects of repeated conditioning and pseudoconditioning trials, 14
Lateral specialization, of verbal vs spatial cognition, EEG asymmetry, 412
Law of initial value, skin conductance during nonhabituating vigilance task, 383
Learning, to adjust to visual distortion, effects on sleep, 498
Lie detection, evaluation of single and combined physiological indices, 578
Love-sickness, diagnosis of, ancient physicians' use of psychophysiology, 546
Low frequency noise generator, congruent with physiological events, 656

Magnetic tape, system for encoding and decoding stimuli and responses, using frequency coding, 380
Magnitude estimates, and effects of shock predictability in time and locus on HR and skin conductance responses, 318
Measurement, of HR and skin conductance base levels and responses, range correction, 373
Memory task, recognition and recall, and pupil dilation, effects of varying task instructions, 505
Menstrual cycle, effects on visual discrimination, 362
Methodology
cardiac contractility measurement, vs HR, as indicators of sympathetic activity during classical aversive conditioning in dogs, and method of contractility measurement in humans, 246
data analysis, computer software, 521, 527, 653
detection of deception, evaluation of physiological indices, 578
electrodermal recovery time, 281, 437
EEG, contamination by blinks and vertical eye movements, correction procedure, 640
EKG, heart rate vs heart period analysis, in infants, 539
EOG, AC vs DC recording for evidence of REMs following visual dream imagery, 393
evoked responses
recording technique, 154, 473
somatosensory, contamination by eye movement, 634
GSR, interrelationships among recovery time, latency, rise time, and amplitude, 437
HR
conditioned response patterns, individual differences and use of factor analysis, 626
direct reading scale for beat-by-beat measurement, 624
range correction for tonic levels and responses, 373
resting levels, cross-laboratory comparisons, 443, 450
skin conductance, range correction for base levels and responses, 373
skin potential base levels, finger and hand differences, effects of habituation, 645
sleep
delta rhythmicity, from EOG recording, 533
recording muscle tone for state determination in infants, from ocular electrodes, 458
reliability of standard sleep measures, 78
subjective pain intensity judgments, reliability and predictability, 290
Minicomputer, preprocessor for cardiovascular functions, 554

Monkey, skin potential, 620
Motivational states, as inferred from resting HR levels, cross-laboratory comparisons, 443, 450
Motor potential, and dependence of the CNV upon a motor response, 178
Motor response, as a condition for CNV, 178
Motor response requirement, effects on directional fractionation to affective stimuli of HR, skin conductance, and vasomotor activity, 419
Motor units, data analysis, computer software
  event frequency histogram, 655
  time interval histogram, 654
Multiple component theory of electrodermal activity, cognitive vs emotional processes, tonic and phasic activity, 218
Multiple response phenomena, electrodermal, learning vs defensive responses, in delayed classical conditioning, derived by factor analysis, 199
Muscle tension (see also Electromyogram)
  and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
  as arousal indicator, 589
Muscle tone recording, for infant sleep state determination, from ocular electrodes, 458
Muscular fatigue, effects of local electrical stimulation and verbal psychological stimulation (positive reinforcement), 368

Neural regulations, in operant control of cardiac function, EEG changes during speeding vs slowing and early vs late in training, 161
Neurochemistry of sleep, effects of large vs moderate doses of tryptophan on REM and slow wave sleep, 345
Noise
  continuous high intensity, effects on sleep, 227
  effect on spontaneous skin potential responses in monkeys, 620
Nystagmus, in sleep vs waking, and occurrence of REMs, as negative evidence for REMs following visual dream imagery, 210

Objective measurement, of physiological indices in detection of deception, 578
Ocular electrodes, for recording of infant muscle tone for sleep state determination, 458
Oculomotor activity, effect on measurement of somatosensory evoked responses, 634
Operant conditioning, see Conditioning
Operant response, instrumentation, skin resistance operated push button, 564
Orienting response (OR)
  electrodermal, 199
  GSR, 14
  HR, 606, 624
  skin conductance, 238

Pain, subjective intensity judgments, reliability and predictability, 290
Parachutist, effect of uncertainty on mastery of stress prior to jump, 615
Parietal EEG, vs occipital, in measurement of lateral specialization of cognitive mode, verbal vs spatial, 412
Pavlov, strength of the nervous system, and augmenters vs reducers, 492
Performance
  and electrodermal recovery rate, 512
  pitch discrimination task, and task difficulty, effects on CNV, 53
  reaction time
    and arousal, effects of incentive, task difficulty, and task novelty, 589
    and HR deceleration, electrodermal responses, and EMG activity during foreperiod, effect of brain damage, 189
Periodicity pitch, cortical mediators of the auditory evoked response, 233
Peripheral denervation, effects on skin potential base level and spontaneous fluctuations in cats, 650
Pitch discrimination accuracy, and task difficulty, effects on CNV, 53
Polarized test signal, for calibrating or testing differential amplifiers, 658
Preception, of shock, effects on HR and skin conductance responses, and anxiety, 318
Predictability
  of shock, in time and locus, effects on HR and skin conductance responses, and anxiety, 318
  of subjective pain intensity judgments, 290
Predictive task, effect on CNV, 178
Preprocessor, to minicomputer, for cardiovascular functions, 554
Programming stimuli
  on magnetic tape, encoding and decoding system, using frequency coding, 380
  using Touch-Tone equipment, 665
Psychological regulations, in operant control of cardiac function, 161
Psychological stimulation, positive verbal reinforcement, effects on output of fatigued muscles, 368
Psychological stress, see Stress
Psychophysiology, abstracts of the 1971 meetings of the Society for Psychophysiological Research, 266
Psychosomatic medicine, effects of cognitive processes, e.g. hypnosis, on autonomic nervous system, 600
Pulse rate (see also Heart rate), use by ancient physicians in diagnosis of love-sickness, 546
Pulse volume, see Finger pulse volume
Pupillary reflex
  constriction, in infants, simple vs stereotype temporal conditioning, 569

dilation
and cognitive processing, effects of varying task instructions, and recognition and recall, 505
in infants, simple vs stereotype temporal conditioning, 569
Push button, for operant response, skin resistance operated vs standard, and readiness potential, 564

Random programmer, use of low frequency noise generator, 656
Range correction, of HR and skin conductance base levels and responses, 373
Reaction time
and age in children, effect of developmental changes in EEG period, 471
and arousal, effects of incentive, task difficulty, and task novelty, 589
and CNV, effects of flicker vs single flash and reaction time feedback, 334
and HR deceleration, electrodermal responses, and EMG activity during foreperiod, effect of brain damage, 189
and skin conductance, 238, 383
time stick for measurement, 552
to auditory stimuli, effects of varying stimulus intensity and judgment accuracy, and HR and cortical evoked response, 428
Readiness potential
and dependence of the CNV upon a motor response, 178
and use of skin resistance operated push button vs standard push button for operant response, 564
Recall task, and pupillary dilation, 505
Recognition task, and pupillary dilation, 505
Recovery time, GSR, 281, 437, 512
Reinforcement
contingent vs noncontingent, effects on operant conditioning of skin potential responses, American vs Japanese subjects, 340
effect on voluntary control of HR, 30
in operant conditioning of diastolic blood pressure, and feedback, 296
of reaction time performance, effects on CNV and reaction time, 334
positive verbal, effect on output of fatigued muscles, 368
Reliability
of standard sleep measures, 78
of subjective pain intensity judgments, 290
REM deprivation, by continuous high intensity white noise, 227
REM sleep, see Sleep
REMs, as responses to visual dream images, 210, 393
Respiration
rate
and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
as arousal indicator, 589
effectiveness in detection of deception, singly and in combination with other measures, 578
of parachutist prior to jump, effect of uncertainty on mastery of stress, 615
volume, effectiveness in detection of deception, singly and in combination with other measures, 578
Response requirements, effects on directional fractionation, 40, 419
Responses, encoding and decoding on magnetic tape using frequency coding, 380
Resting levels, HR, cross-laboratory comparisons, 443, 450
R–R interval analysis, heart period, vs heart rate analysis, in infants, 539

Self control of HR, see Voluntary control
Self-ratings, of alertness, and skin conductance response during cumulative expectancy of vigilance task, and reaction time, 383
Serotonin, increases in brain by tryptophan administration, effects on REM and slow wave sleep, large vs moderate doses, 345
Sex differences, in HR control, 667
Sexual arousal, and urinary acid phosphatase secretion, 69
Shock
HR and skin conductance responses, effects of predictability in time and locus, and anxiety, 318
subjective intensity judgments, reliability and predictability, 290
Shock threat
and electrodermal recovery rate, 512
anticipation of intensity, as indexed by electrodermal recovery time, 281
effect on directional fractionation of HR and skin conductance, and interaction with the effects of intake-rejection tasks and verbalization, 40
Signal detection
auditory sensitivity and response bias, and EKG phase, 484
visual, differential sensitivity as function of EKG cycle phase, 357
Signal detection analysis, in assessing effects of activation, menstrual cycle, and diurnal rhythms on visual discrimination, sensory sensitivity vs response criterion, 362
Signal tracing, for calibrating or testing differential amplifiers, 658
Signal vs non-signal stimuli, skin conductance OR, in hyperactive vs normal children, and reaction time performance, 238
Skin conductance
and HR, directional fractionation, effects of

intake-rejection tasks, verbalization requirements, and threat of shock, 40
base level
and reaction time performance, effects of incentive, task difficulty, and task novelty, 589
as arousal indicator, 589
effects of cognitive activity, stress, and anxiety, 218
range correction for individual differences, 373
orienting response, to signal vs non-signal stimuli, in hyperactive vs normal children, and reaction time performance, 238
response
during vigilance task, effects of cumulative expectancy, and reaction time and alertness ratings, 383
latency, during conditioning and pseudoconditioning, effects of different interstimulus intervals, 14
ORs vs CRs vs defensive responses in delayed classical conditioning, derived by factor analysis, 199
range correction for individual differences, 373
to affective stimuli, directional fractionation, effects of cognitive elaboration and motor response requirement, 419
to shock, effects of predictability in time and locus, and anxiety, 318
Skin potential
base level
and CNS activation, effects of peripheral denervation and death in cats, 650
finger and hand differences, effects of habituation, 645
evoked responses, habituation, simple light vs complex sound stimuli, monkeys, 620
response, operant conditioning of, effects of contingent vs noncontingent reinforcement, Japanese vs American subjects, 340
spontaneous fluctuations
and CNS activation, effects of peripheral denervation and death in cats, 650
frequency, noise vs rest conditions, monkeys, 620
Skin resistance operated push button, vs standard button, for operant response, and readiness potential, 564
Skin temperature, peripheral, voluntary control of, effects of hypnosis, 600
Sleep
abstracts of the 1971 meetings of the Association for the Psychophysiological Study of Sleep, 84
background EEG intensity in children, and auditory evoked response, 477
body posture, recording of, 660
infants, state determination, recording of muscle tone from ocular electrodes, 458
reliability of standard measures, 78
REM
and learning, effects of adjustment to visual distortion, 498
effects of continuous high intensity white noise, 227
effects of large and moderate doses of L-tryptophan, 345
eye movements and visual dream imagery
AC vs DC recording, 393
in nystagmus patients, 210
slow wave
effects of large and moderate doses of L-tryptophan, 345
recorded from EOG electrodes, 533
Sleep posture, recording of, 660
Sleep scoring, computer software, 653
Slow wave sleep, see Sleep
Somatosensory evoked response, see Evoked response
Sound stimulation, effects of varying intensity and judgment accuracy on HR, cortical evoked responses, and reaction time, 428
Spatial cognition, vs verbal, EEG asymmetry, 412
Spontaneous fluctuations
pulse volume vs finger volume, 402
skin potential, 340, 620, 650
Stimuli, encoding and decoding on magnetic tape using frequency coding, 380
Stimulus complexity, effects on habituation of skin potential responses in monkeys, 620
Stimulus intensity, effects on HR, evoked responses, and reaction time, 428
Stimulus intensity judgments, of auditory stimuli, effects of accuracy on HR, cortical evoked response, and reaction time, 428
Stimulus programmer, using Touch-Tone equipment, 665
Stimulus specificity, and relationship between reaction time performance and arousal, 589
"Strength of the nervous system," and kinesthetic aftereffects, as measures of augmenters vs reducers, 492
Stress
effect on directional fractionation of HR and skin conductance, and interaction with the effects of intake-rejection tasks and verbalization, 40
effects on GSR spontaneous fluctuations and base levels, and effects of cognitive activity and anxiety, 218
mastery of, by parachutist prior to jump, effect of uncertainty, 615
Subjective judgments, of pain intensity, reliability and predictability, 290
Subjective ratings, of pleasant and unpleasant stimuli, effects of false feedback of HR changes and attention, 21
Sympathetic activity, during classical aversive conditioning in dogs, influence on HR and cardiac contractility, 246

Task complexity, and electrodermal recovery rate, 512
Task difficulty
and accuracy of pitch discrimination, effects on CNV, 53
effect on arousal and reaction time performance, 589
Task instructions, variable, effects on pupil dilation and recognition and recall, 505
Task novelty, effects on arousal and reaction time performance, 589
Temporal conditioning, see Conditioning
Temporal EEG, vs occipital, in measurement of lateral specialization of cognitive mode, verbal vs spatial, 412
Thresholds, pain, reliability and predictability, 290
Time discrimination, in infants, simple vs stereotype temporal conditioning, pupillary dilation and constriction, 569
Time interval histogram, for motor unit analysis, computer software, 654
Time stick, for reaction time measurement, 552
Touch-Tone generator, for programming stimuli, 665
Transformation, of heart period data into heart rate, statistical effects on results, 539
Tryptophan, effects on REM and slow wave sleep, large vs moderate doses, 345
Two-flash fusion threshold, effects of menstrual cycle, diurnal rhythms, and induced high HR, 362

Uncertainty, effect on mastery of stress by parachutist prior to jump, 615
Urinary acid phosphatase secretion, as indicator of sexual arousal, 69

Vasomotor activity
cephalic pulse amplitude, 419, 606
finger pulse volume, 402, 419, 578, 589
Verbal cognition, vs spatial, EEG asymmetry, 412
Verbalization, effect on directional fractionation of HR and skin conductance, and interaction with the effects of intake-rejection tasks and shock threat, 40
Vertex potential, evoked response to periodic complex sound, reflecting acoustic spectrum vs modulation rate, 233
Vertical eye movements, vs eyeblinks, contamination of EEG recordings, correction procedure, 640
Vigilance, expectancy during task, effects on skin conductance response and reaction time, and alertness ratings, 383
Visual discrimination, effects of menstrual cycle, diurnal rhythms, and induced high HR, 362
Visual distortion, learning to adjust, effects on sleep, 498
Visual evoked response, see Evoked response
Visual sensitivity, signal detection, as function of EKG cycle phase, 357
Voice latency, effectiveness in detection of deception, singly and in combination with other measures, 578
Voluntary control
diastolic blood pressure, with feedback and reinforcement, 296
GSR, effects of instructions and accurate and false feedback, 305
HR
and blood pressure and EEG changes, early vs late in training and slowing vs speeding, 161
effects of feedback, 30, 283
effects of instructions, 30, 283
effects of reinforcement, 30
sex differences, 667
using external feedback, effect of awareness of heart activity, 63
peripheral skin temperature, effects of hypnosis, 600
skin potential responses, effects of contingent vs noncontingent reinforcement, Japanese vs American subjects, 340
